

OOP – Project Requirements

Description:

Students are required to design and implement an application using Object-Oriented Programming concepts. The project must have a clear idea and defined goal.

Requirements:

1. The application must have a clear purpose (problem to solve or service to provide).
2. A Graphical User Interface (GUI) is required for user interaction.
3. The project should be of **medium complexity** (not too simple).
4. The application should demonstrate proper use of OOP principles such as:
 - Classes and Objects
 - Inheritance
 - Encapsulation
 - (Optional but preferred) Polymorphism
5. The application should preferably include **more than one window/interface**.
6. Code should be well-structured, readable, and organized.
7. Students must fully understand all parts of their project and be able to explain the code, design, and functionality when asked.

Report Requirement:

- Each group must submit a report that includes:
 1. Project title and objective
 2. Description of the idea and how the application works
 3. Explanation of OOP concepts used in the project
 4. Screenshots of the GUI design

5. Screenshots of important parts of the code with explanation
6. Description of the main features and functionalities

Bonus:

- Projects with advanced features or creative ideas will receive bonus marks.
- Well-designed and user-friendly GUI will receive bonus marks.

Submission Instructions:

- Submit the full source code.
- Submit the project report (PDF).
- Include screenshots showing the application interface.
- Any missing requirement may result in grade deduction.
